NEW QUESTION: 1

Which of the following reviews would you recommend to address this issue?

- A. A walkthrough of the requirement specification, to check for errors.
- B. An inspection of the code for this part of the functionality to try to localise the defective parts of the code.
- C. A management review of defects logged and cleared to see if defects are being addressed correctly.
- D. A technical review of the industry standard routing protocols to see if they have inaccuracies in them.

Answer: B

NEW QUESTION: 2

Which of the following would be an entry criterion into site acceptance testing for the air quality monitoring system?

- A. That the requirements for temperature control have been signed-off.
- B. That the system has been tested at levels of oxygen usage well beyond anticipated personnel levels.
- C. That the functional specification accurately reflects requirements R1 and R2.
- D. That the code written to fulfil the requirement to monitor carbon dioxide levels has been 100% path tested.

Answer: B

NEW QUESTION: 3

Which two of the following measures would give the best indication of likely product quality?

- a. Number of hours of overtime worked.
- b. Number of test runs.
- c. Coverage of requirements achieved.
- d. Defect trends.

e. Budget sent so far.

A. a and c.

B. b and d.

C. c and d.

D. d and e.

Answer: C

NEW QUESTION: 4

Which of the following provides the best example of a product risk leading to a project risk?

A. There may be unexpected lags on the network traffic communication, causing drivers to slow the trains down unnecessarily.

B. The new development staff may require training for this type of system, which, if not carried out, may lead to an increase in the number of defects introduced.

C. The signalling systems may have more defects than anticipated, leading to the need for more retesting to be carried out.

D. The budget may need to be increased significantly during the project, otherwise there may be delays in the delivery of the system.

Answer: C

NEW QUESTION: 5

Which of the following review types would be recommended at the start of each Sprint, for the reason given?

A. An inspection, to find errors in the user-stories.

B. A technical review of the test plan, to ensure that the developers are aware that they must produce good quality code.

C. A walkthrough of the set of user-stories, to ensure that the developers and testers understand what is to be built.

D. A management review, to check that the user-stories will accurately reflect the rules for accessibility.

Answer: C

NEW QUESTION: 6

You need to test that the rules have been correctly set up in the configuration table, according to the specification. Which one of the following test design techniques would be most suitable for this?

A. Boundary value analysis.

B. Decision table testing.

C. Data flow testing.

D. Statement testing.

Answer: B

NEW QUESTION: 7

When a software defect in a system has been found and fixed, which of the following activities should be undertaken next?
